# ABSTRACT

Event management system is used to manage all the activity related to event. In any event many service providers work simultaneously and it is very hard to manage these providers. It is also important for event organizer that he has all the contacts details of these service providers so that he can contact them any time to plan an event at given time. To manage all these activity we have developed this software, These contacts are essentially providers of specific services who can be mobilized quickly to participate in any given event. To make an event successful event manager needs different service provider like Sound systems services, Lighting providers, Canteen services, stage construction and so on. In any event many service providers work simultaneously and it is very hard to manage these providers. It is also important for event organizer that he has all the contacts details of these service providers so that he can contact them any time to plan an event at time. In present system Event Company has to do all management work manually. They keep all payment information on papers. There is no system to check the past expenses on any event. To do this they have to check payment register and this task is very time consuming and tiresome.

# CHAPTER 1

# INTRODUCTION

## 1.1 MOTIVATIONS

Event management system is used to manage all the activity related to event. In any event many service providers work simultaneously and it is very hard to manage these providers. It is also important for event organizer that he has all the contacts details of these service providers so that he can contact them any time to plan an event at given time. To manage all these activity we have developed this software. To get success in the event management business, user should have strong network contacts of service provider. These contacts are essentially providers of specific services who can be mobilized quickly to participate in any given event. To make an event successful event manager needs different service provider like Sound systems services, Lighting providers, Canteen services, stage construction and so on. In present system Event Company has to do all management work manually. They keep all payment information on papers. There is no system to check the past expenses on any event. To do this they have to check payment register and this task is very time consuming and tiresome. Keeping this entire problem in mind we have developed this system. This system helps the event management company to manage their paperwork online and they can also retrieve report of last event they have completed.

## 1.2 PROJECT OVERVIEW

Event management is the application of project management to the Creation and Development of large scale events such as festivals, Wedding ceremonies, formal parties. People that are need to find or book online event halls and or willing to see the packages and timing slots online about halls. They will able to get all this in-

formation through this system. To get success in the event management business, user should have strong network contacts of service provider. These contacts are essentially providers of specific services who can be mobilized quickly to participate in any given event. To make an event successful event Manager needs different service provider like Sound systems services, Lighting providers, Canteen services, stage construction and so on.

## 1.3 PROBLEM STATEMENT

In any event many service providers work simultaneous and it is very hard to manage these providers. It is also important for event organizer that he has all the contacts details of these service providers so that he can contact them any time to plan an event at given time. In present system Event Company has to do all management work manually. They keep all payment information on papers. There is no system to check the past expenses on any event. To do this they have to check payment register and this task is very time consuming and tiresome.

## 1.4 OBJECTIVES

This system automatically generates certificate and issue it/mail it. System very efficiently store, maintain and retrieve data from its database and can be used for further analysis. This system provides latest notification to its user. Time saving activity. The data in a centralized way which is available to all the event managers. Easy to manage historical data in database. Participants can register for any happening event from anywhere. Event manager can keep records of participants.

# CHAPTER 2

# SYSTEM DESIGN AND LITERATURE SURVEY

## 2.1 SYSTEM DESIGN

### 2.1.1 EXISTING SYSTEM

In the existing system customer contacts the company for event management. He provides the details of the event and its requirements. He explains its aims, how long it will last, its format (Presentation/Workshop and/or Exhibition etc.), expected number of delegates/guests, equipment and furniture required, whether any delegate pack or promotional material is to be distributed, and other facilities required. The Event Manager studies the requirements of the event carefully and using the event management system The company offers some readymade packages to choose from. If the customer agrees, the event is booked and the advance deposit is taken by the company. According to the requirements of the event, different bookings are made. A strategic schedule is prepared for smooth conduct of the event. The Event Management System helps the manager in different tasks of planning, scheduling and conducting the event. This system provides instant access to event-related information. This existing system is not providing secure registration and profile management of all the users properly. This system is not providing on-line help. This system doesn't provide tracking of users activities and their progress. This manual system gives us very less security for saving data and some data may be lost due to mismanagement. This system is not providing event management through internet. This system is not providing proper events information. The system is giving manual information through the event management executer.

### 2.1.2 PROPOSED SYSTEM

Event Management System is an Online event management software project that serves the functionality of an event manager. The system allows only registered users to login and new users are allowed to register on the application. This is a web application but desktop application of the same application is also available. The project provides most of the basic functionality required for an event. It allows the user to select from a list of event types. Once the user enters an event type eg (wedding, concert etc), the system then allows the user to select the date and time of event, place and the event equipment's. All this data is logged in the database and the user is setting up his username and password while registering. The data is then sent to the administrator (website owner) and they may interact with the client as per his requirements and his contact data stored in the database. The proposed system is computerized and has been developed using PHP, HTML, CSS, therefore it gives more facilities than the present system. It provides quick access to any data that is stored in the database. In this system, the user has to enter the data only once and then it will get stored in the database which gets linked with all files. This reduces the workload of the user and it is also a time saving process. The information about any event can be retrieved easily whenever required. The system maintains all records easy. The proposed system consists of different packages (in terms of cost range) for each category of events.

## 2.2 LITERATURE SURVEY

The spectrum used for the review of literature focuses upon the definition of an event, quality and difficulty to manage an event. An event can be described as a public assembly for the purpose of celebration, education, marketing or reunion. Events can be classified on the basis of their size, type and context. An event can

be a social / lifecycle event like a birthday party, engagement, wedding, funeral etc. or an education and career event like an education fair, job fair, workshop, seminar, debate, contest, competition etc. Quality in terms of event management can be described as the degree of excellence of an event. The quality of service provided is dependent upon many parameters which should answer the question “Is this good enough?” According to Andersson and Wesslau (2000), when using events, companies get the possibility to have their own-right to the consumer during the duration of the event. This means that if a company manages to get the consumer to attend the event, the distortion from the competitors will be gone or at least minimized during the duration of the event. Also, events contain tangible elements, such as food, beverages and other products sold or given away, but are essentially a service in that they consist of intangible experiences of finite duration within a temporary, managed atmosphere. As with all services, this experiential “product” is produced and consumed simultaneously, is highly heterogeneous and very difficult to store or control. The arguments presented by the literature reviews do run parallel with its empirical counter-part most of the time. However, irrespective of its size and contents, events always have the knack of surprising people. Even though they are planned and every settings of an event are monitored, but the event itself will always provide the physical experience that is entirely new and different from the previous ones. Android have become popular among smartphone users. This paper discuss about the intend to solve the problems of propagating news and information, and also alleviate the problem of traditional event managing procedures such as lots of paperwork, or long queue at the registration desk. The objective of this project is to develop an android application which will provide an interesting news and events so that users will be able to manage their event smoothly. The objective of this project is to develop an android application which

will provide an interesting news and events so that users will be able to manage their event smoothly. Event organizers are continually appreciating the benefits of an online event management system such as an Event management application. Organizing an event is not an easy task, especially if the target audience is of a substantial size and if there are many teams involved during the execution phase. For this reason, automating the processes found in the event planning life cycle is a godsend to organizers who are still using old school methods. An online management system practically automates the organizing process and leaves lesser room for human error. This app is design which could effectively manage the event in an organization. This application contains the database which has the details of the participants, their name, and the events they are willing to participate, their registration ID, and event details like day, venue, time, etc. Instead of using paperwork, participant can simply use this mobile application to register. Events Management System is very helpful for events. This application being as a platform to know the events, to apply for the events. Event organizer is an application under project management for managing festivals or social events like gathering, colleges, events, conferences etc. Lastly, this application can be access everywhere, anytime as everybody have their own smartphone. several papers based on event management system. First paper which we have studied is named as “Barcode Enabled Event Management System for Logistics and Consumables Management” which was published by Aswin Chandrasekharan, Nikhail Venkat, Aniruddha P.B, and Siva Rama Krishnan Somayaji. In this paper authentication is provided by barcode. Barcode used to ensure smooth and quick registration. It is faster and efficient as well as it is secure .The outcome of this is quick and secured registration. The second paper named as “Smart Event Management System” which is published by Assistant Prof. Khalil Pinjari and Khan Nur. This paper introduced a system which

will be computerized and has been developed using advanced language. It was a web application. Now a day's, the events such as festivals, wedding etc. have become a core part of life which has resulted in event planning and Management Company to rise. With the customers and events increasing at larger rate, it is difficult to manage using traditional system using spreadsheets, traditional database and more. In order to overcome the drawbacks of traditional Event Managing System, a new Smart Event Management System has been introduced which uses the modern technology of .Net Framework for managing various tasks and planning for employees, customer, location, transport and more The third paper named as " Event Management System" which is published by M. Mahalakshmi, S. Gomathi and S. Krithika,.The main idea of this paper is used to maintain the College Event information and organize the event and to send the Student Registration time through sums with verification code to the student using mobile application based on Android App. The tools constitutes Android SDK development, Java. several papers based on event management system. First paper which we have studied is named as " Special Event Management And Event Marketing: A Case Study Of TKBL all-star 2011" which was published by L. McCathie and K. Michael,LungChuang Wang, RoozbehDerakhshan. In this paper aims to understand the how to manage and market the events successfully satisfied participants. The second paper named as "Event Management System" Which is published by Prof.Lee, M. J., & Back, K. J. (2005).This paper is introduced the Event Manage and development of festivals, events and conferences. The system allow registered user login and new user are allowed to register on application. The third paper named as "Smart Event Management System" which is published by Assistant Prof Neuendorf, K. A. (2002), and Getz, D. (2012). This paper introduced a system which will be computerized and developed using advanced language as Content

Management System. various papers related to the event management system. First paper which we have studied is named as “Barcode Enabled Event Management System for Logistics and Consumables Management” which was published by Aswin Chandrasekharan , Nikhail Venkat, Aniruddha P.B, and Siva Rama Krishnan Somayaji. In this paper authentication is provided by barcode. Barcode used to ensure smooth and quick registration. It is faster and efficient as well as it is secure .The outcome of this is quick and secured registration. M.Mahalakshmi had a central idea to maintain the College Event information and also to organize the event and send the Student Registration time in the way of sums with a verification code sent to the student using a mobile application on Android App. The tools contain Android SDK development, Java Abbreviations and Acronyms. Sandeep Misal, Segar Jadhav, Tushar Jore, Archana Ugale in this paper it review Review on College Event Organizer to reduce the overhead of the organizing committee and Accuracy in work Organizing all event in a better way.

# CHAPTER 3

# SYSTEM REQUIREMENTS

## 3.1 SOFTWARE REQUIREMENTS

**Front-End**: HTML, CSS, JavaScript

**Programming languages**: HTML, CSS, JavaScript

**Database:** MySQL Server

**Operating System:** Windows

## 3.2 HARDWARE REQUIREMENTS

**Processor:** Any processor above 500 MHz

**Ram:** 512MB

**Hard Disk:** 40GB

# CHAPTER 4

# MODULES

## 4.1 MODULES DESCRIPTION

### EVENT MODULE:

The main purpose for developing this module is to manage the event data wise. Event is an important module in the project Event management System which we have develop on HTML. So all events will be managed by admin and user will be able see event record.

### Features of Event Module:

- Admin can manage the event
- Admin can edit/delete the event
- Admin can see the list of all events
- Student can see event.

### EVENT THEME MODULE:

The main purpose for developing this modules is to Event Theme. So all event theme will be managed by admin and user will be able to see event theme.

### Features of Event Theme Module:

- Admin can manage the event theme
- Admin can edit/delete the event theme
- Admin can see the list of all event theme

### USER REGISTRATION MODULE:

The main purpose of the module is provide all the functionality related to user register. It tracks all the information and details of user. We have developed all type of CRUD (Create, Read, Update and Delete)

### Feature of User registration module:

- Admin can add user.

- Admin can see the list of user details.
- Only admin can edit and update the record of the user.
- Admin will be able to delete the record of the user.
- All user forms are validated on client side using HTML.

## 4.2 ADVANTAGES

- It saves time organizing different events.
- It helps to control the problems that usually happen in an event.
- Online data submission is secure.
- It gives real-time results.
- It saves lots of time.
- It is easy to use and fast to implement.
- It helps to check appointment of particular venue.
- Quick and easy registration for participants.
- It is web based and easy to access information from any where on their devices.

# CHAPTER 5

# CONCLUSION AND FUTURE ENHANCEMENT

## 5.1 CONCLUSION

Event Management System is user friendly Event Management System is Cost effective system It is customized with activities related to event management life-cycle It provides a new edge to management industry Solution Dot always keeps your objectives and goals on top priority while developing any plan of work.

## 5.2 FUTURE ENHANCEMENT

Event management is a growing industry. As time changes, people are more invested in the quality of experience. Therefore, one will prefer hiring an event manager to oversee his or her event and deliver an unforgettable experience. This, therefore, is the perfect timing for anyone who wishes to delve into event planning, build a name, and secure a permanent feat in the industry. People and different companies appreciate the work of event managers which making the future much more promising People organize events for various reasons. As an event manager, you have a whole load of options to choose from. This not only makes this career enjoyable but also offers you a chance to improve on your skills. Different events have different planning techniques. This wide variety also offers you a chance to choose an area that you find most enjoyable. For example, you can choose beach parties or weddings depending on which one you deem fit. Even though event management requires a level of hard work, it is highly rewarding. We are not only talking about the pay or monetary benefits, but the level of satisfaction you get from a successful event is unparalleled. One good event may open doors for you permanently since you get to market your services as you offer them.
